

# Lucky Nkolonzi

---

Junior Mobile / Full-Stack Developer

 South Africa

 GitHub: <https://github.com/nkolonzilucky>

---

## Professional Summary

Junior Mobile / Full-Stack Developer with hands-on experience building production-style mobile applications using Expo, TypeScript, and Supabase.

---

## Technical Skills

### Mobile & Frontend

- Expo (React Native)
- React
- TypeScript
- JavaScript

### Backend & Database

- Supabase
- PostgreSQL
- SQL
- Row Level Security (RLS)
- Database triggers & functions

### Cloud & Infrastructure

- Microsoft Azure (cloud fundamentals)
- AWS

## Tools

- Git & GitHub
  - VS Code
  - Bash / Linux Terminal
- 

## Mobile & Frontend Projects

- Built cross-platform mobile apps using Expo (React Native), TypeScript and Supabase/PostgreSQL
- Enforced user-scoped data access using Row Level Security (RLS)
- Implemented server-side rate limiting using PostgreSQL triggers and functions

- Created a typed API layer to keep client code aligned with the database schema

## 1. 📱 Mood Tracker — Mobile Mood Tracking App - 2026

🔗 GitHub Repository: <https://github.com/nkolonzilucky/mood-app>

🔗 Demo Video: <https://github.com/nkolonzilucky/mood-app/blob/origin/assets/demo/mood-app-demo.gif>

## 2. 📱 aboutTheBarber — Barber Appointment Management App - 2026

🔗 GitHub Repository: <https://github.com/nkolonzilucky/aboutTheBarber>

🔗 Demo Video:

---

## Professional Experience

### Software Engineer – Support Team

Hexagon J5, Cape Town, RSA | May 2021 – Jun 2024

Designed and maintained Python-based ETL scripts to import, transform, and reconcile flat-file datasets into relational databases, restoring lost data and enabling downstream quality assurance testing.

Investigated and resolved data discrepancies by identifying mismatched records and implementing corrective SQL and Python scripts, improving data accuracy and audit reliability.

Enhanced data integrity by developing cleanup utilities and schema modification tools, supporting accurate reporting and long-term maintainability.

Worked with React (TypeScript) in internal tools and support-facing interfaces, applying core concepts such as component lifecycle, state management, and Redux to diagnose UI-related issues and support feature behavior.

Prepared and delivered an internal training presentation on React fundamentals (state management, component lifecycle, Redux) to onboard new team members and improve shared understanding across the support team.

Identified UX bottlenecks caused by tightly coupled Redux side effects and advocated for decoupled, optimistic UI updates.

Authored detailed Knowledge Base documentation outlining issue resolution steps and standard operating procedures, contributing to audit readiness and faster incident resolution.

Collaborated with global engineering and support teams to ensure timely delivery of accurate, reconciled datasets in production environments.

### Systems Engineer

Tata Consultancy Services, Cape Town, RSA | Mar 2020 – Mar 2021

- Built and maintained a promotions data pipeline using SQL and Python (Pandas), integrating 3 large CSV sources into standardized formats.

- Improved data ingestion by eliminating redundant uploads, saving time and processing resources.
- Applied reconciliation logic to detect and prevent duplicate records and misaligned datasets across teams.
- Strengthened validation by testing and debugging SQL scripts against production data.

## Systems Engineer (Intern)

Tata Consultancy Services, Bangalore, India | Feb 2019 – Feb 2020

- Transitioned from manual testing into development; built APIs for data access and validation.
- Created customer-facing APIs with robust data handling and validation, ensuring accuracy and consistency.
- Demonstrated ability to adapt quickly to coding-heavy, data-focused responsibilities.

## Electrical Engineer (Intern)

Eskom Distribution, Cape Town | Mar 2017 – Feb 2019

- Developed an application that queried customer billing databases, flagging overdue accounts and presenting data in dashboards.
- Led a project involving data collection, validation, and reporting, strengthening skills in team leadership and analytical problem-solving.

---

## Education & Certifications

- **Bachelor of Science (BSc) in Electrical Engineering** - 2017 | University of Cape Town
- **Associate Data Analyst Certificate** - 2026 | DataCamp
- **Microsoft Azure Fundamentals (AZ-900)** — 2025  
| Microsoft

### **Certificates of completion** | Kaggle

- **Intro to Programming Certification of completion** - 2025
- **Python Certification of completion** - 2025
- **Intro to Machine Learning Certification of completion** - 2025
- **Pandas Certification of completion** - 2025
- **Data Cleaning Certification of completion** - 2025
- **Data Visualization Certification of completion** - 2025
- **Intermediate Machine Learning Certification of completion** - 2025

---

## Additional Notes

- This CV emphasizes recent, hands-on project work that reflects current technical skills

- Code samples, database logic, are available via the provided GitHub links
